

PROTECT YOURSELF, YOUR FAMILY AND

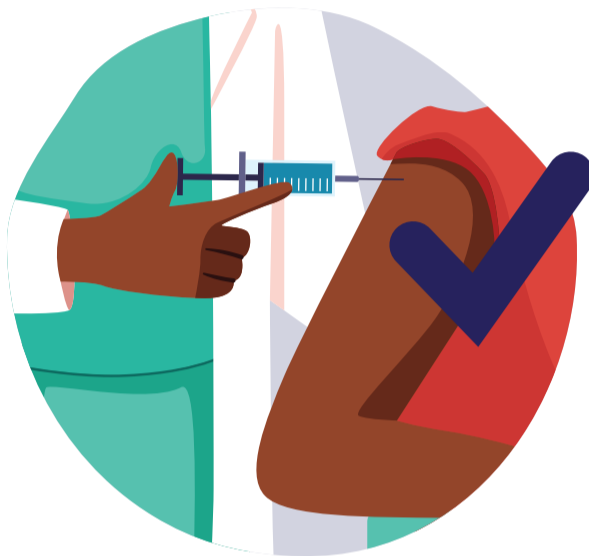

COMMUNITY FROM COVID SICKNESS

Information about the COVID-19 vaccine

COVID-19 vaccine

There are new vaccines that will teach your body to fight the COVID-19 sickness. The more people that have the vaccine, the safer we will be.

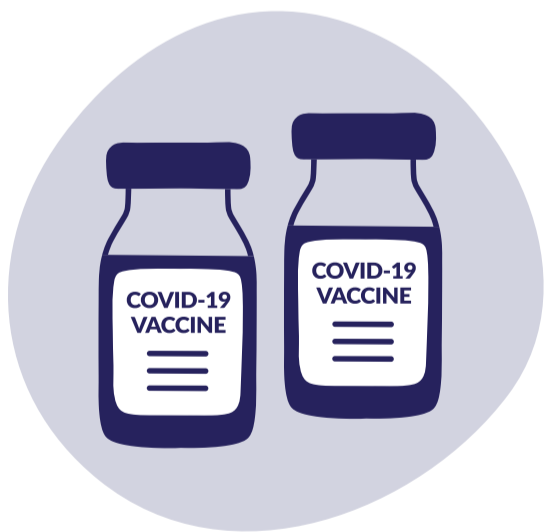

Tested and approved

There are different vaccines that have all been tested and approved by the Therapeutic Goods Administration. They are effective for everyone.

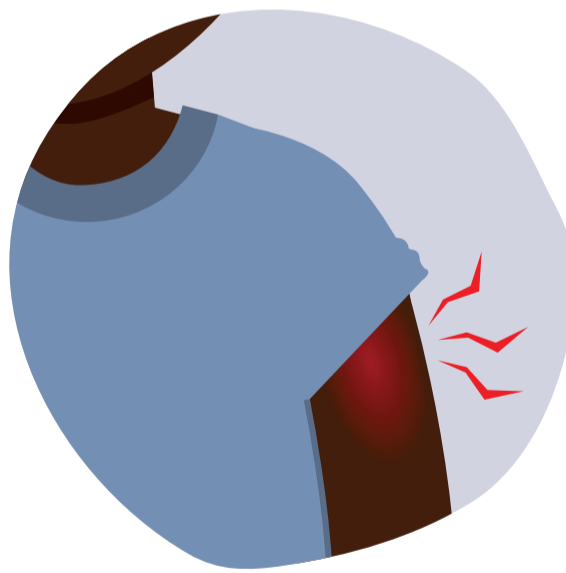

12+ years only

People 12 years and over can have the vaccine. Young people and children can get sick from COVID-19 too.

You will need 2 needles

You must receive two doses of the same COVID-19 vaccine to ensure the best protection.

Having side effects

After your vaccine you may have a sore arm or headache. This is normal and a good sign - it means the vaccine is working.

Your vaccination records will be saved

Your vaccination will be recorded on the Australian Immunisation Register. You can get a copy from your health clinic.
